Experiment 13: BlossomGifts – Online Flower and Gift Shopping System.

1. Aim

To design and develop an interactive online flower and gift shopping website named BlossomGifts that allows customers to browse products, register, log in, add items to a shopping cart, place orders, track order status, and view order history. The system also enables administrators to manage products, inventory, prices, and customer information.

2. Procedure

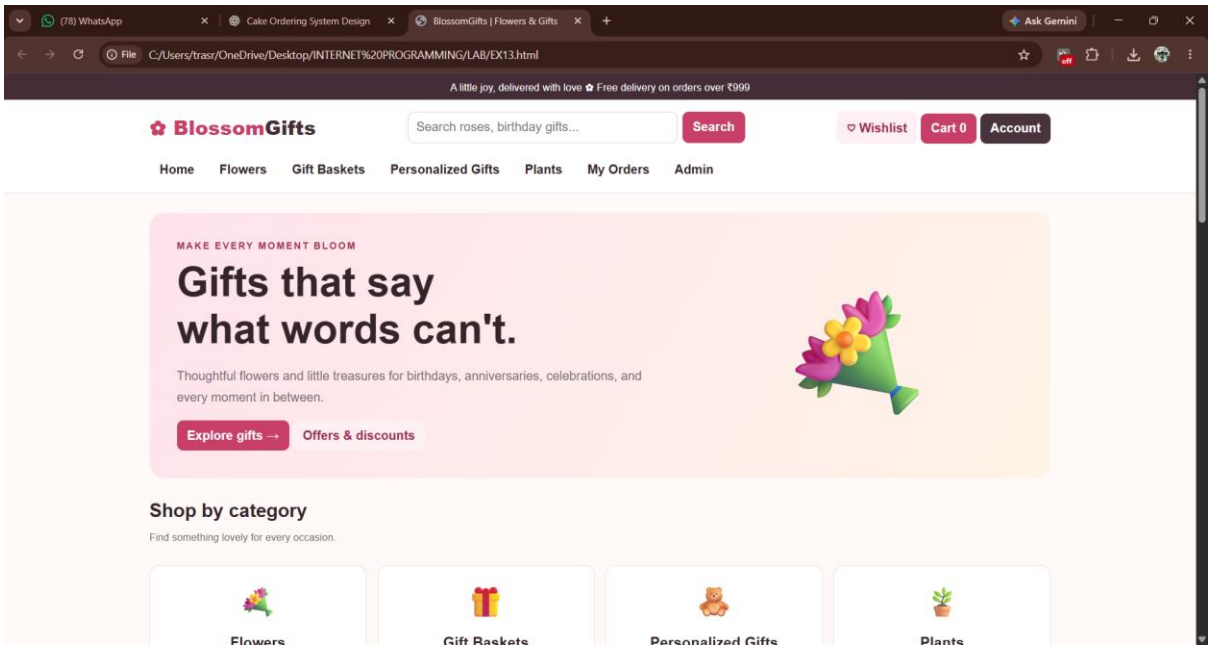

1. Create the website structure using HTML.
2. Design a user-friendly interface using CSS with responsive layouts.
3. Organize products into categories such as flowers, gift baskets, and personalized gifts.
4. Display product categories and subcategories on the home page.
5. Implement customer registration, login, search, and logout functionalities.
6. Add product details, availability checking, and shopping cart management.
7. Develop checkout functionality with delivery date, time, and payment options.
8. Implement order confirmation, order tracking, and order history.
9. Provide administrator features to add, edit, and delete products and update prices and inventory.
10. Enable administrators to view customer details and order summaries.
11. Test all functionalities to ensure smooth navigation and correct operation.

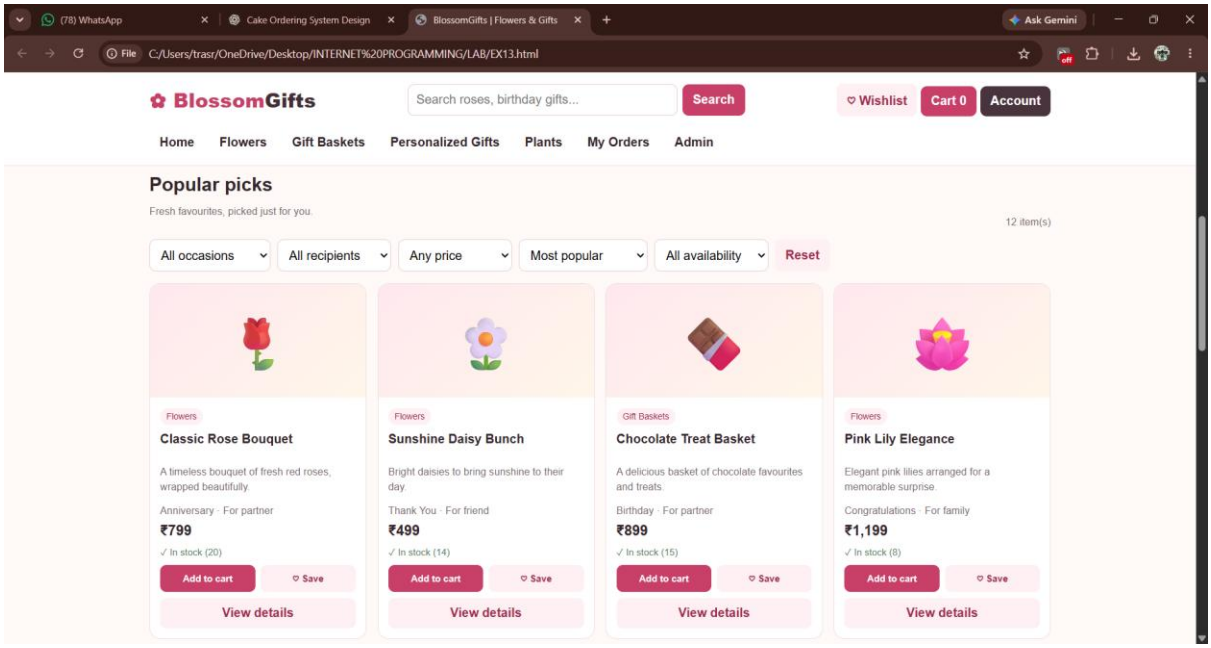

3. Code Snippet

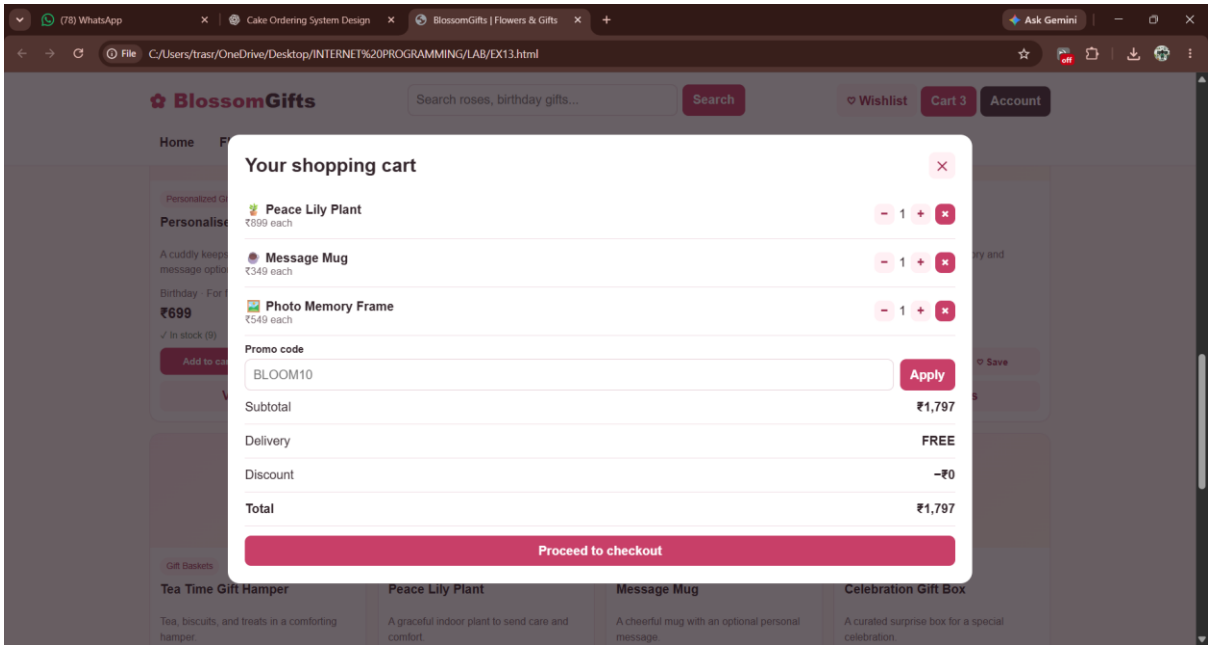

```
<h2>Shop by Category</h2>
<div class="categories">
  <div class="category">
    <h3>Flowers</h3>
    <p>Roses, Lilies, Bouquets</p>
  </div>
  <div class="category">
    <h3>Gift Baskets</h3>
    <p>Birthday and celebration gifts</p>
  </div>
  <div class="category">
    <h3>Personalized Gifts</h3>
```

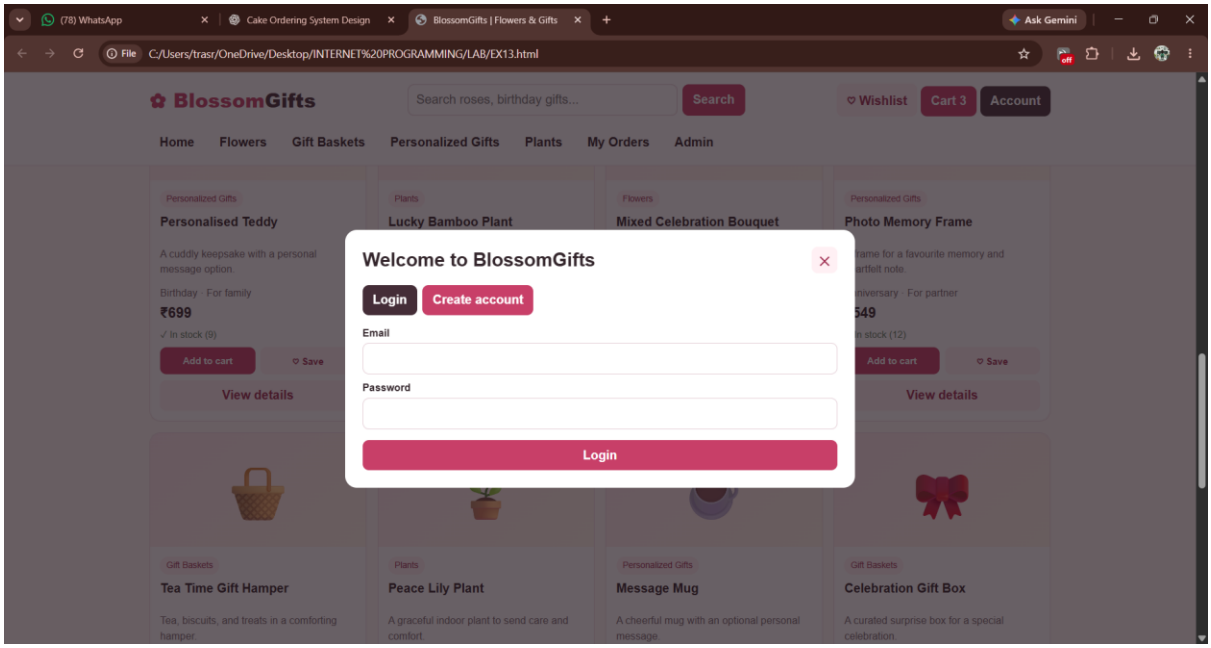

```
        <p>Mugs, Photo Frames, Greeting Cards</p>
    </div>
</div>
<button onclick="addToCart('Rose Bouquet')">
    Add to Cart
</button>
<script>
    let cart = [];
    function addToCart(item) {
        cart.push(item);
        alert(item + " added to shopping cart!");
    }
</script>
```
