Experiment 16: ComplainEase – Online Complaint Management System

1. Aim

To design and develop an online complaint management system named ComplainEase using HTML, CSS, and JavaScript, enabling users to register complaints, track their status, provide feedback, and allowing officers and administrators to manage complaints efficiently.

2. Procedure

1. Create the HTML structure for the ComplainEase website.
2. Design a responsive user interface using CSS.
3. Implement user registration and login functionality.
4. Develop a complaint submission form with category, title, description, location, and supporting document fields.
5. Implement complaint tracking, status updates, complaint history, and feedback features.
6. Create an officer dashboard to view complaints, update statuses, and upload proof of work.
7. Develop an admin dashboard to manage user accounts, officer accounts, complaint assignments, passwords, and website features.
8. Use JavaScript to handle user interactions and store demonstration data in browser localStorage.
9. Test the application using user, officer, and admin demo accounts.

3. Code Snippet

HTML – Complaint submission form

```
<form onsubmit="submitComplaint(event)">
  <label>Complaint Category</label>
  <select name="category" required>
    <option value="">Select category</option>
    <option>Electricity</option>
    <option>Water Supply</option>
    <option>Public Facilities</option>
    <option>Other</option>
  </select>
  <label>Complaint Title</label>
  <input name="title" required>
```

```
  <label>Description</label>
  <textarea name="description" required></textarea>
  <label>Location</label>
  <input name="location" required>
  <button type="submit">Submit Complaint</button>
</form>
```

JavaScript – Generating a complaint ID and saving the complaint

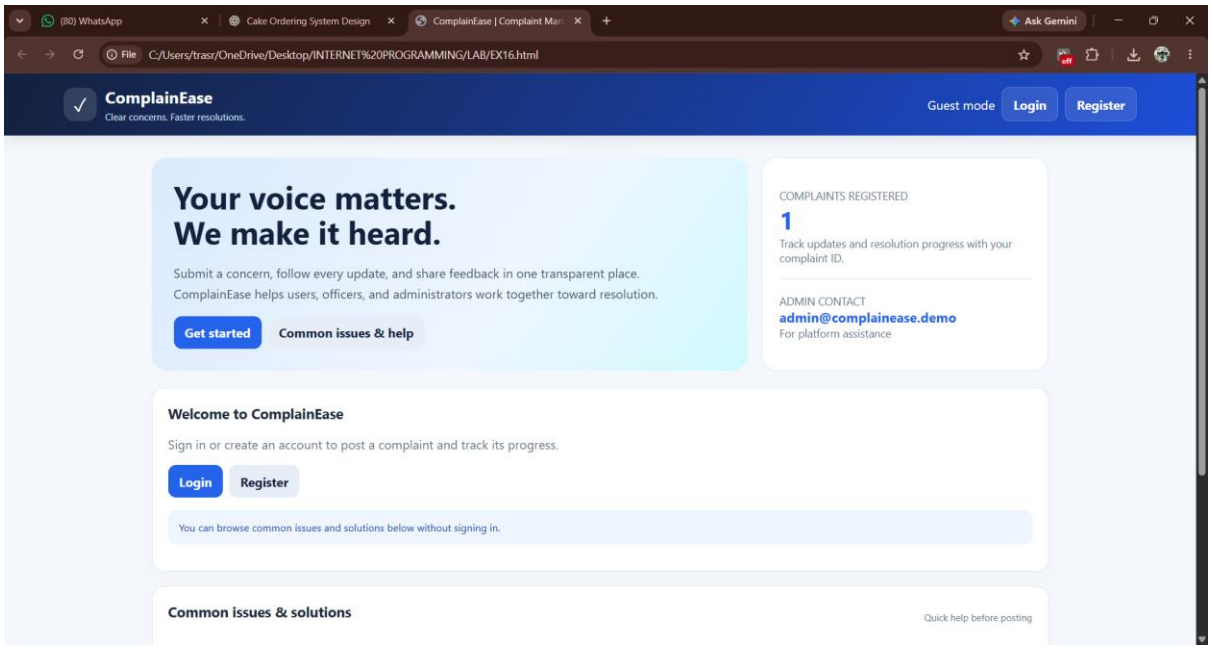

```
function submitComplaint(event) {
  event.preventDefault();
  const form = new FormData(event.target);
  const complaint = {
    id: "CE-" + Date.now().toString().slice(-7),
    category: form.get("category"),
    title: form.get("title"),
    description: form.get("description"),
    location: form.get("location"),
    status: "Pending",
    created: new Date().toISOString()
  };
  let complaints = JSON.parse(
    localStorage.getItem("complaints") || "[]"
  );
  complaints.push(complaint);
  localStorage.setItem(
    "complaints",
    JSON.stringify(complaints)
  );
  alert("Complaint submitted successfully!");
  event.target.reset();
```

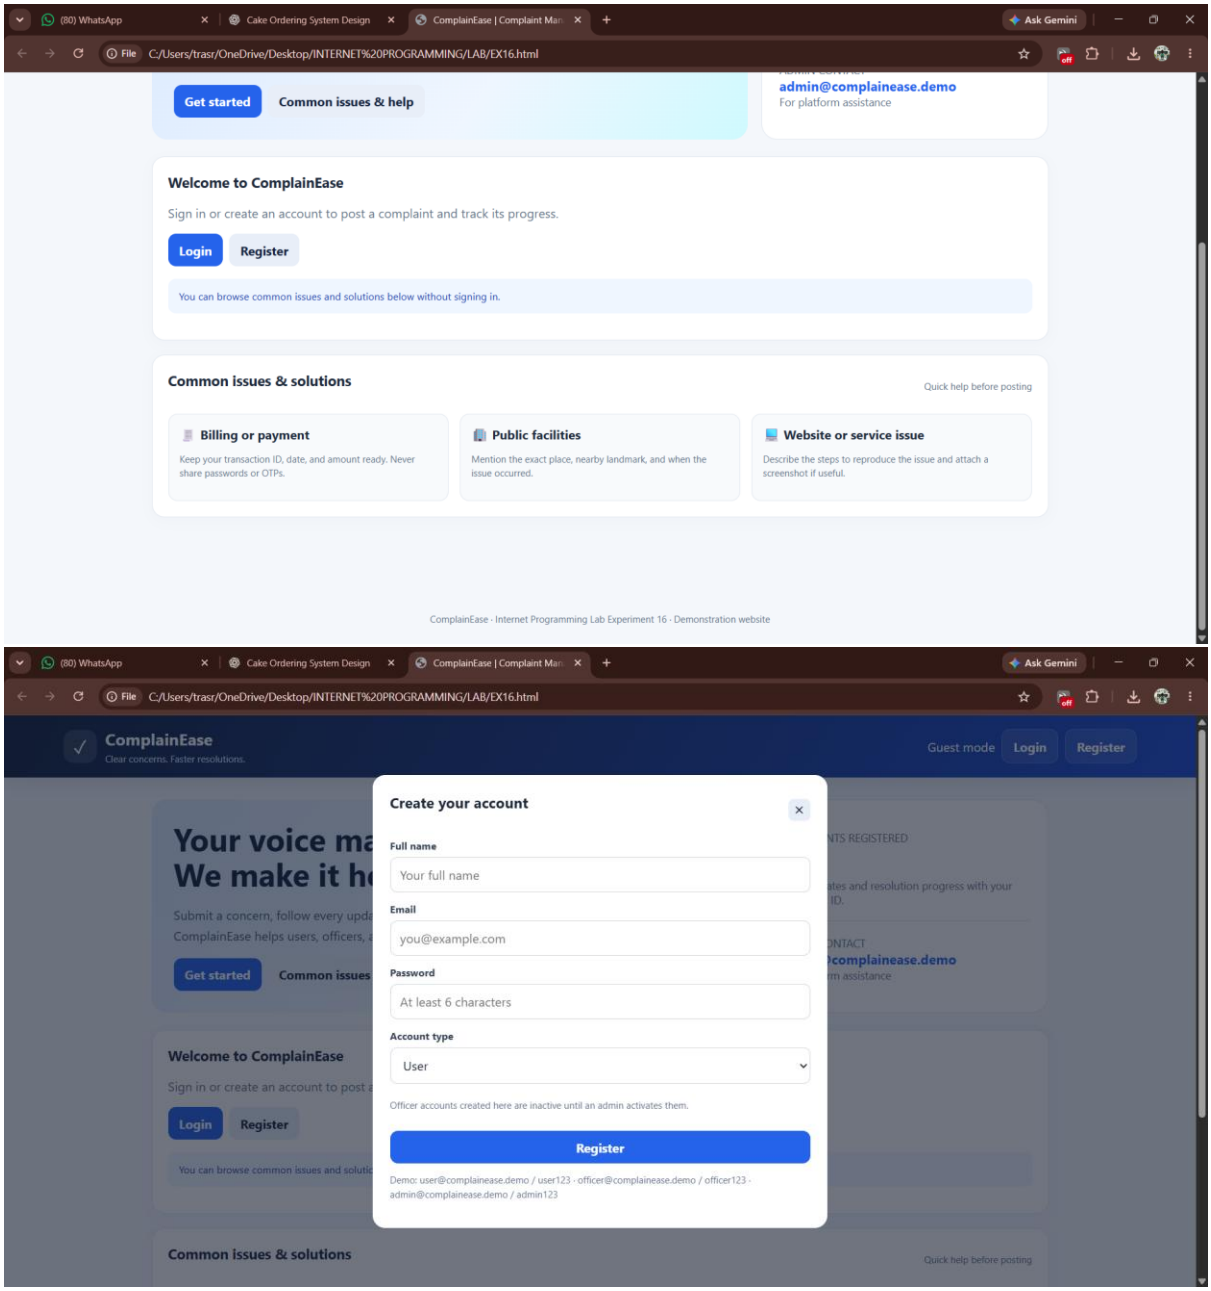

}

4. Output

Demo login credentials:

Role	Email	Password
User	user@complainease.demo	user123
Officer	officer@complainease.demo	officer123
Admin	admin@complainease.demo	admin123

5. Result

Thus, the ComplainEase Online Complaint Management System was successfully designed and developed using HTML, CSS, and JavaScript. The application supports complaint registration, status tracking, feedback, officer operations, and administrative management through a responsive web interface.
