Experiment 19: VetCure – Veterinary Consultation System

1. Aim

To design and develop a VetCure veterinary consultation system using HTML, CSS, and JavaScript that enables farmers to register, log in, submit animal health complaints with symptoms and media attachments, communicate with doctors, view treatment guidance, make payments (demo), and track complaint status.

2. Procedure

1. Create a folder named VetCure and create index.html, style.css, and script.js.
2. Design the user interface using HTML and CSS.
3. Implement farmer and doctor registration and login.
4. Allow farmers to submit animal complaints with symptoms, area, and selected image, audio, or video files.
5. Display registered doctors, clinic types, and consultation fees.
6. Allow doctors to view complaints, post solutions, and update complaint status.
7. Display animal care guides and veterinary news.
8. Implement user profile, feedback, payment information, and area-wise complaint reports.
9. Store demonstration data using browser localStorage.
10. Run index.html in a browser and test the system.

3. Code Snippet

A. HTML (index.html)

```
<h1>🐾 VetCure</h1>
<p>Digital Veterinary Care for Every Farmer</p>
<button onclick="showComplaintForm()">
  Post Complaint
</button>
<button onclick="showDoctors()">
  View Doctors
</button>
<button onclick="showMyComplaints()">
  My Complaint Status
</button>
```

```
<section id="content"></section>
<script src="script.js"></script>
```

B. CSS (style.css)

```
body {
  font-family: Arial, sans-serif;
  background: #f7faf8;
  color: #19332a;
  margin: 0;
}
header {
  background: #176b4d;
  color: white;
  padding: 20px;
  text-align: center;
}
button {
  background: #176b4d;
  color: white;
  border: none;
  padding: 10px 15px;
  margin: 5px;
  border-radius: 8px;
  cursor: pointer;
}
.card {
  background: white;
  padding: 18px;
  margin: 12px;
  border-radius: 12px;
  border: 1px solid #dce8e1;
}
```

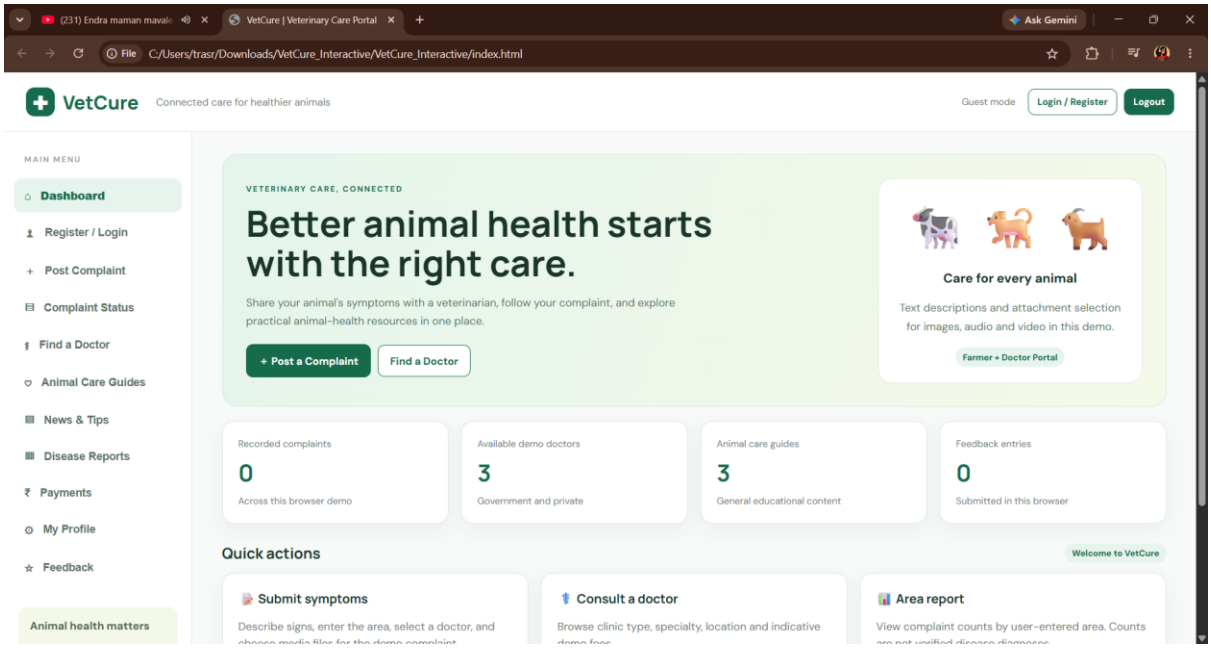

C. JavaScript (script.js)

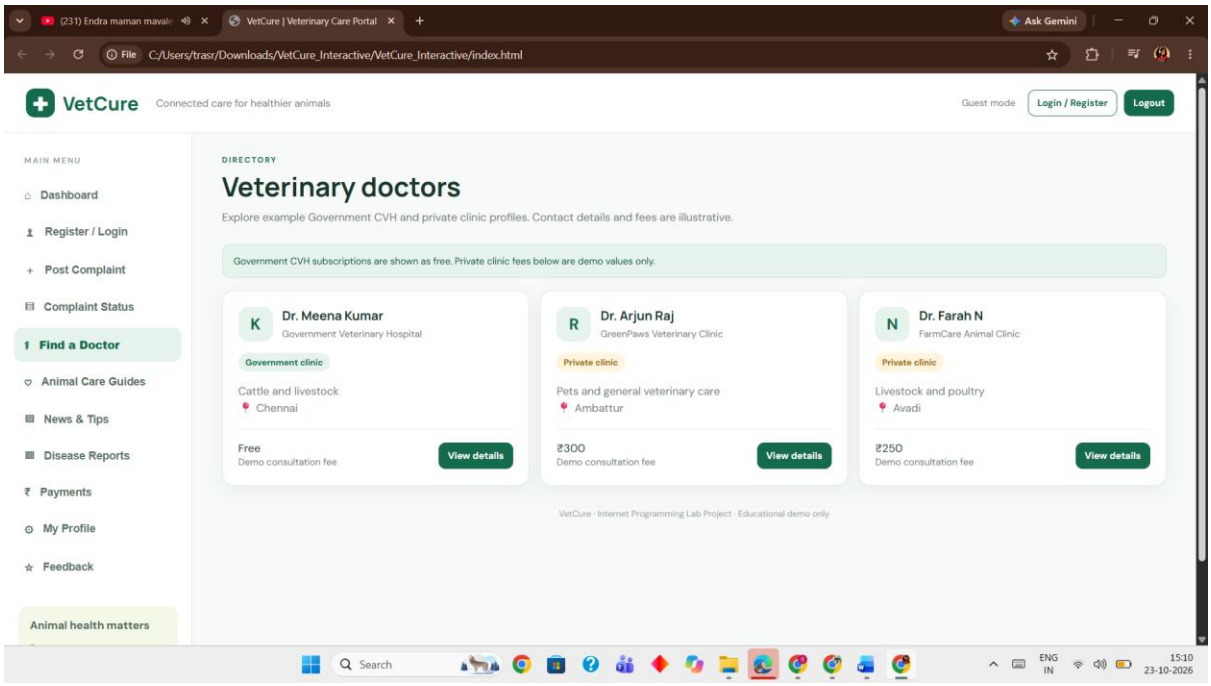

```
let complaints = [];
function submitComplaint() {
  const symptoms = document
    .getElementById("symptoms").value;

  if (symptoms.trim() === "") {
    alert("Enter animal symptoms");
    return;
  }
  const complaint = {
    id: Date.now(),
    symptoms: symptoms,
    status: "Submitted"
  };
  complaints.push(complaint);
  localStorage.setItem(
    "complaints",
    JSON.stringify(complaints)
  );
  alert("Complaint submitted successfully!");
}
function showMyComplaints() {
  const data = JSON.parse(
    localStorage.getItem("complaints") || "[]"
  );
  document.getElementById("content").innerHTML =
    "<h2>My Complaints</h2>" +
    data.map(c =>
      `<div class="card">
        <p>Complaint ID: ${c.id}</p>
```

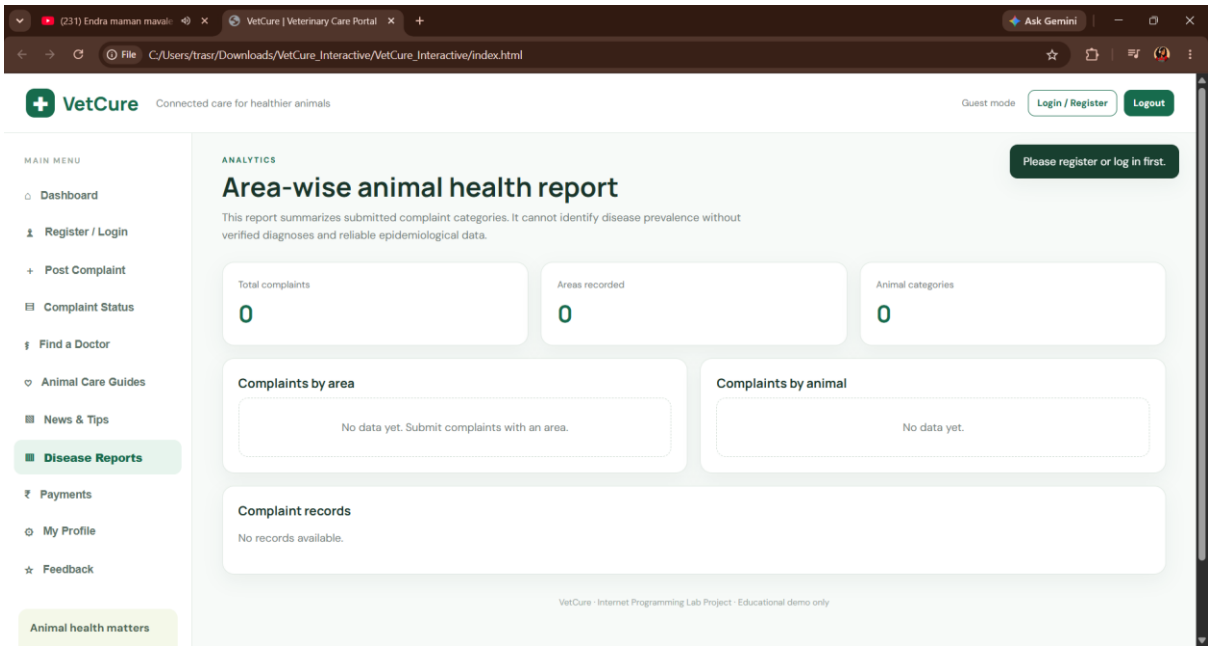

```
      <p>Symptoms: ${c.symptoms}</p>
      <p>Status: ${c.status}</p>
    </div>`
  ).join("");
}
```

4. Output

5. Result

Thus, the VetCure veterinary consultation system was designed using HTML, CSS, and JavaScript. It demonstrates farmer and doctor interfaces, animal complaint submission, doctor responses, complaint tracking, and veterinary information management.
