Experiment 20: RentRide – Online Vehicle Rental System

1. Aim

To design and develop an interactive online vehicle rental website named RentRide using HTML, CSS, and JavaScript that allows users to register, search vehicles, make bookings, check booking status, and manage their profiles, while administrators manage vehicle details and booking requests.

2. Procedure

1. Create a project folder named RentRide_Interactive.
2. Create three main files: index.html, style.css, and script.js.
3. Design the website interface using HTML, including the home page, vehicle listing, login, registration, booking, profile, and admin pages.
4. Apply CSS to style the website and make it responsive across different screen sizes.
5. Use JavaScript to implement user registration, login, vehicle search, filtering, and booking functionality.
6. Store user details, vehicle information, bookings, and reviews in the browser's localStorage.
7. Implement the admin module to add, edit, and delete vehicles and approve or reject booking requests.
8. Add booking status tracking, rental cost calculation, customer reviews, and support request features.
9. Open index.html in a web browser or run the project using VS Code Live Server.
10. Test the user and admin functionalities to verify that the website works correctly.

3. Code Snippet

HTML – Vehicle search and booking interface (index.html)

```
<div class="search-panel">
 <label>
  Location
  <input id="homeLocation" placeholder="Enter location">
 </label>
 <label>
  Vehicle Type
  <select id="homeType">
   <option value="">All Types</option>
   <option>Car</option>
   <option>SUV</option>
```

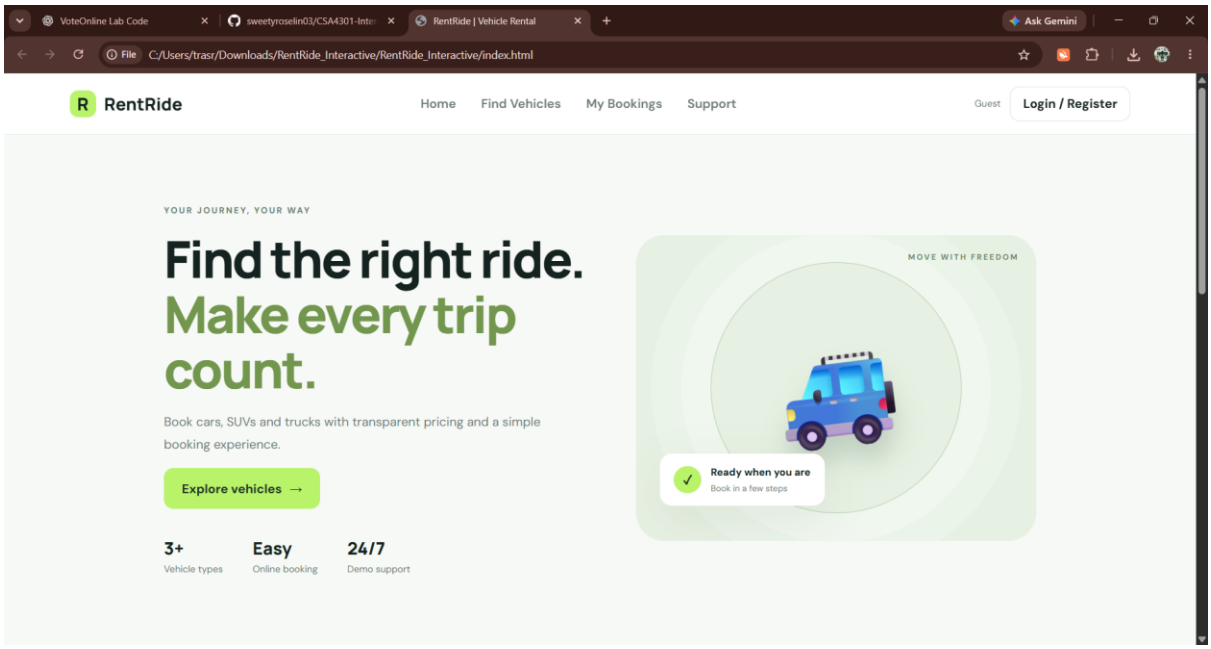

```
    <option>Truck</option>
  </select>
 </label>
 <label>
  Pickup Date
  <input id="homePickup" type="date">
 </label>
 <label>
  Return Date
  <input id="homeReturn" type="date">
 </label>
 <button onclick="searchFromHome()">
  Search Vehicles
 </button>
</div>
```

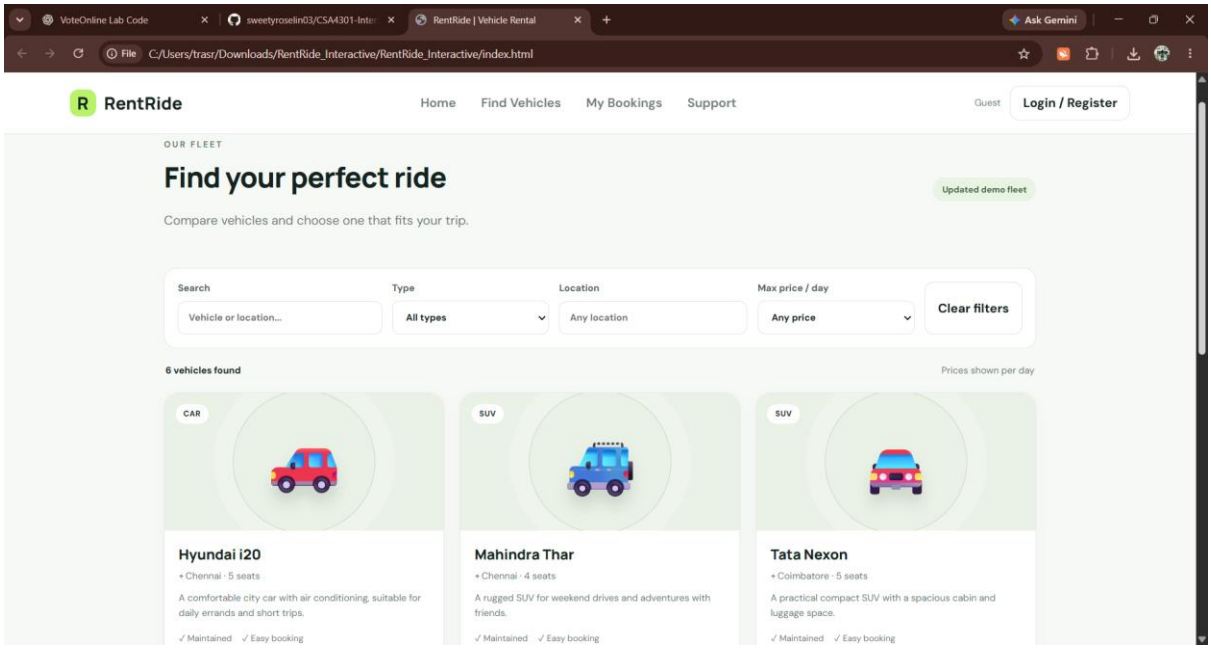

JavaScript – Booking submission (script.js)

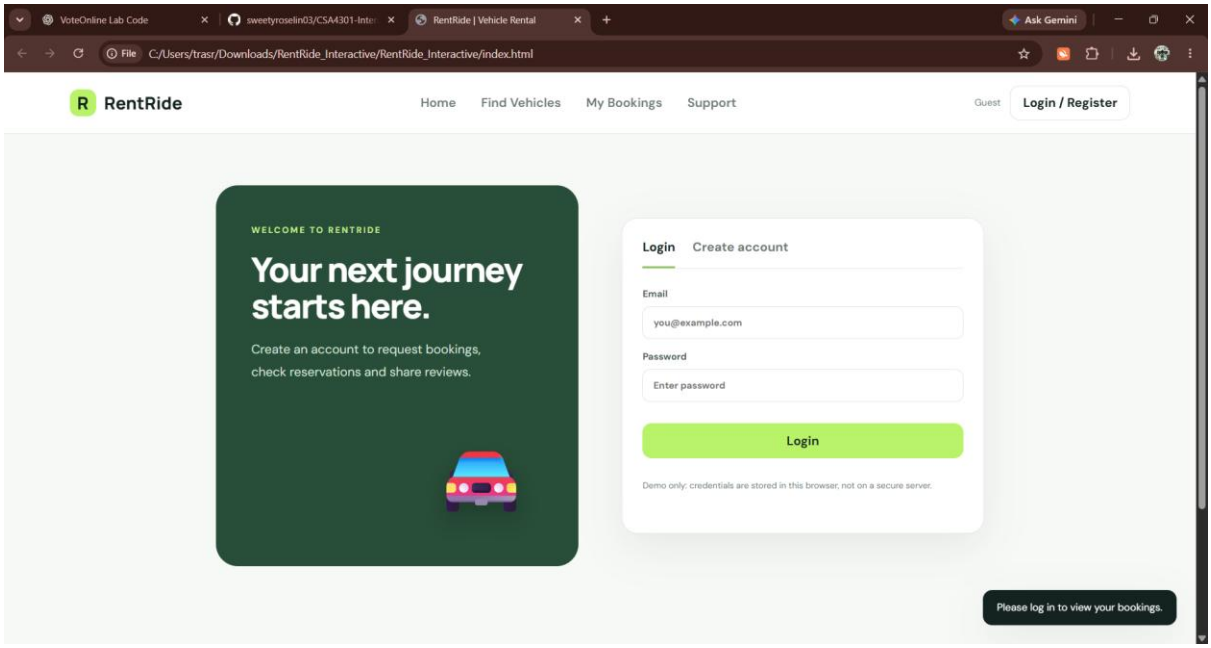

```
function submitBooking(event, vehicleId) {
 event.preventDefault();
 const bookings = JSON.parse(
  localStorage.getItem("rr_bookings") || "[]"
 );
 const booking = {
  id: "b" + Date.now(),
  vehicleId: vehicleId,
  pickup: document.getElementById("bookPickup").value,
  returnDate: document.getElementById("bookReturn").value,
  status: "Pending"
 };
 bookings.unshift(booking);
 localStorage.setItem(
  "rr_bookings",
```

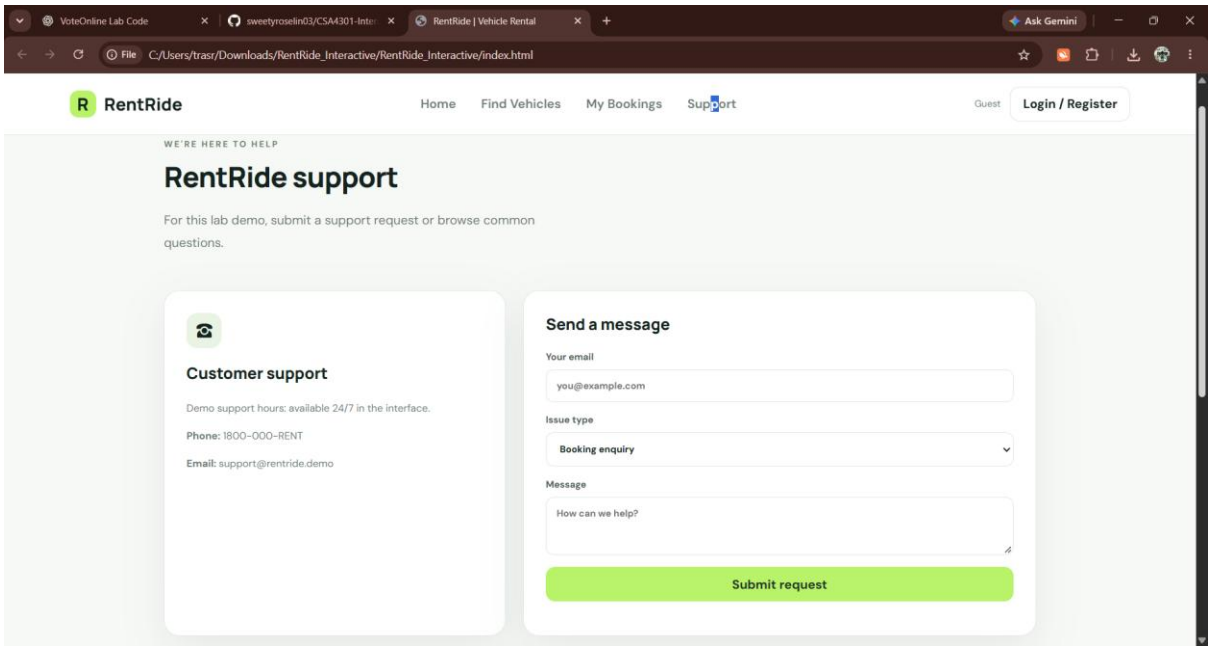

```
    JSON.stringify(bookings)
  );
  alert("Booking request submitted successfully!");
}
```

4. Output

5. Result

Thus, the RentRide online vehicle rental system was designed and developed successfully using HTML, CSS, and JavaScript. The website provides interactive vehicle searching, booking management, customer profile management, and administrative vehicle and booking controls.
