Experiment 7: Online Beauty Parlour Appointment Booking System

1. Aim

To design and develop an Online Beauty Parlour Appointment Booking System using HTML, CSS, and JavaScript to display beauty services, book appointments, manage reservations, and collect customer feedback.

2. Procedure

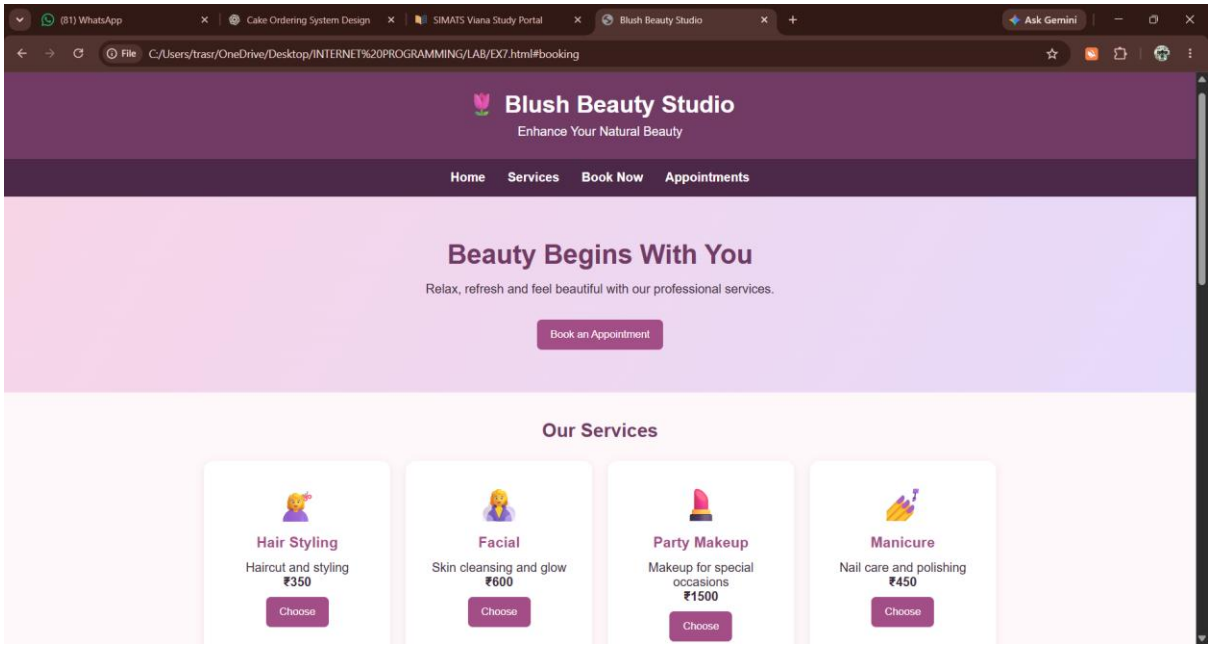

1. Create an HTML file named beauty.html.
2. Design the webpage using HTML and CSS.
3. Display beauty services, prices, and stylist details.
4. Provide appointment booking with date and time selection.
5. Add options to view, reschedule, and cancel appointments.
6. Include customer feedback and an admin management section.
7. Run the HTML file in a web browser and verify the output.

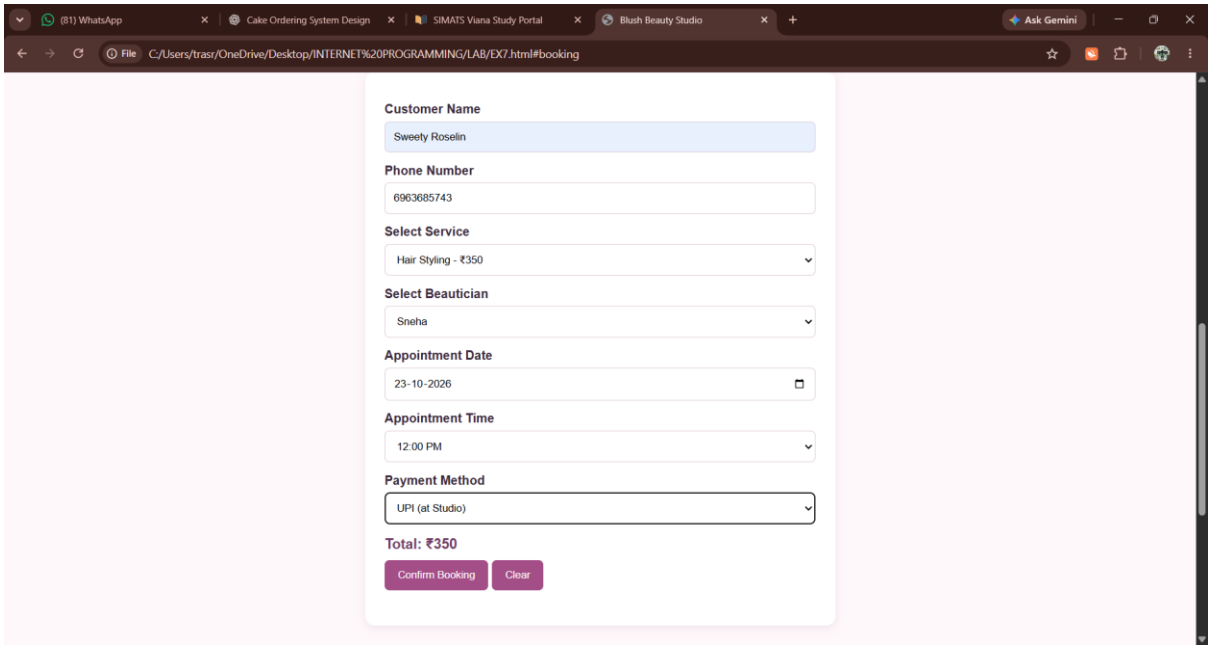

3. Code Snippet

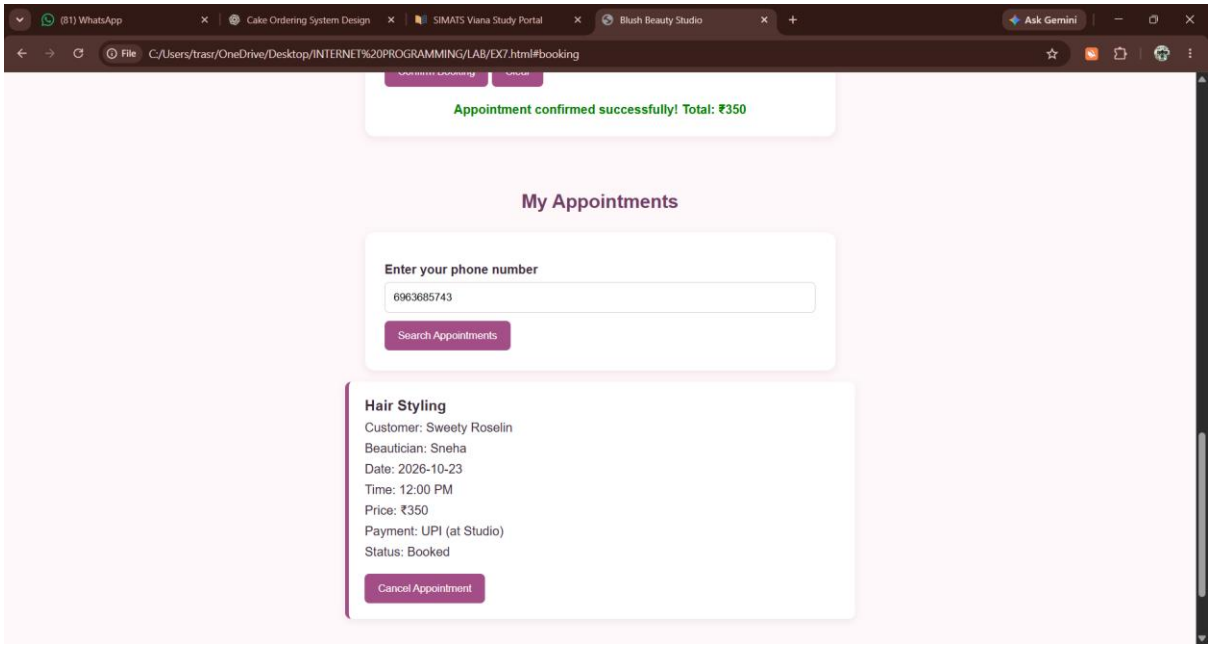

```
<h2>Beauty Parlour Appointment Booking</h2>
<form id="bookingForm">
  <input type="text" id="name" placeholder="Customer Name" required>
  <select id="service" required>
    <option value="">Select Service</option>
    <option>Hair Styling</option>
    <option>Facial</option>
    <option>Party Makeup</option>
    <option>Manicure</option>
  </select>
  <input type="date" id="date" required>
  <input type="time" id="time" required>
  <button type="submit">Book Appointment</button>
</form>
<p id="result"></p>
<script>
document.getElementById("bookingForm").onsubmit = function(e) {
  e.preventDefault();
```

```
  document.getElementById("result").textContent =
    "Appointment booked successfully for " +
    document.getElementById("name").value + "!";
};
</script>
```

4. Output

5. Result

Thus, the Online Beauty Parlour Appointment Booking System was successfully designed using HTML, CSS, and JavaScript with basic appointment management and feedback functionalities.
