Experiment 8: MedCare Hospital Online Appointment Booking System

1. Aim

To design and develop an interactive online hospital appointment booking system using HTML, CSS, and JavaScript that allows patients to search for doctors and hospitals, register, log in, book and cancel appointments, submit check-in details, view appointment history, and provide doctor reviews. It also provides an admin dashboard to manage doctors, appointments, hospitals, and ratings.

2. Procedure

1. Create an HTML page to design the MedCare Hospital website structure.
2. Use CSS to style the website with a responsive layout, navigation bar, doctor cards, forms, tables, and dashboard.
3. Add a doctor search module to filter doctors by specialty, hospital, and location.
4. Implement patient registration and login using JavaScript.
5. Create an appointment booking form to select a doctor, hospital, date, and time.
6. Validate appointment dates and check slot availability before confirming bookings.
7. Implement appointment cancellation, check-in submission, and appointment history.
8. Add a review module that allows patients to rate doctors and submit feedback.
9. Create hospital registration and location update features with Google Maps links.
10. Develop an admin dashboard to manage doctors and appointments and view statistics.
11. Use browser local storage to retain demo data and test the website in a web browser.

3. Code Snippet

HTML – Appointment booking form

```
<form id="bookingForm">
  <label>Select Doctor</label>
  <select id="bookingDoctor" required></select>

  <label>Appointment Date</label>
  <input type="date" id="appointmentDate" required>

  <label>Appointment Time</label>
  <select id="appointmentTime" required>
    <option value="">Select a time</option>
```

```
        <option>09:00 AM</option>
        <option>10:00 AM</option>
        <option>11:00 AM</option>
        <option>02:00 PM</option>
    </select>

    <button type="submit">Confirm Appointment</button>
</form>
```

JavaScript – Appointment booking validation

```
document.getElementById("bookingForm")
.addEventListener("submit", function(event) {
    event.preventDefault();

    if (!currentPatient) {
        alert("Please log in before booking.");
        return;
    }

    const date =
        document.getElementById("appointmentDate").value;

    if (date < todayString()) {
        alert("Select a valid appointment date.");
        return;
    }

    alert("Appointment booked successfully!");
});
```

Note: This is a short illustrative snippet. The complete website contains the full booking logic, including slot validation, appointment storage, and history management.

5. Result

Thus, the interactive MedCare Hospital Online Appointment Booking System was designed and developed successfully using HTML, CSS, and JavaScript. The system demonstrates patient registration, doctor search, appointment booking and management, check-in, reviews, hospital management, and administrative functions through a responsive web interface.
