2. Online Hotel Room Booking Website

1. Aim

To design a responsive hotel room booking website using HTML and CSS that allows users to view rooms, check availability, book rooms, and access hotel information.

2. Algorithm

1. Start the program.
2. Create the webpage using HTML and style it using CSS.
3. Display hotel details, room types, prices, and amenities.
4. Provide user registration and login forms.
5. Create a booking form to enter check-in date, check-out date, and number of guests.
6. Display booking history and cancellation options.
7. Provide an administrator section to manage room prices, availability, and bookings.
8. Display contact information, FAQs, travel guide, and privacy policy.
9. Run the webpage in a browser.
10. Stop the program.

3. Simple Code Snippet

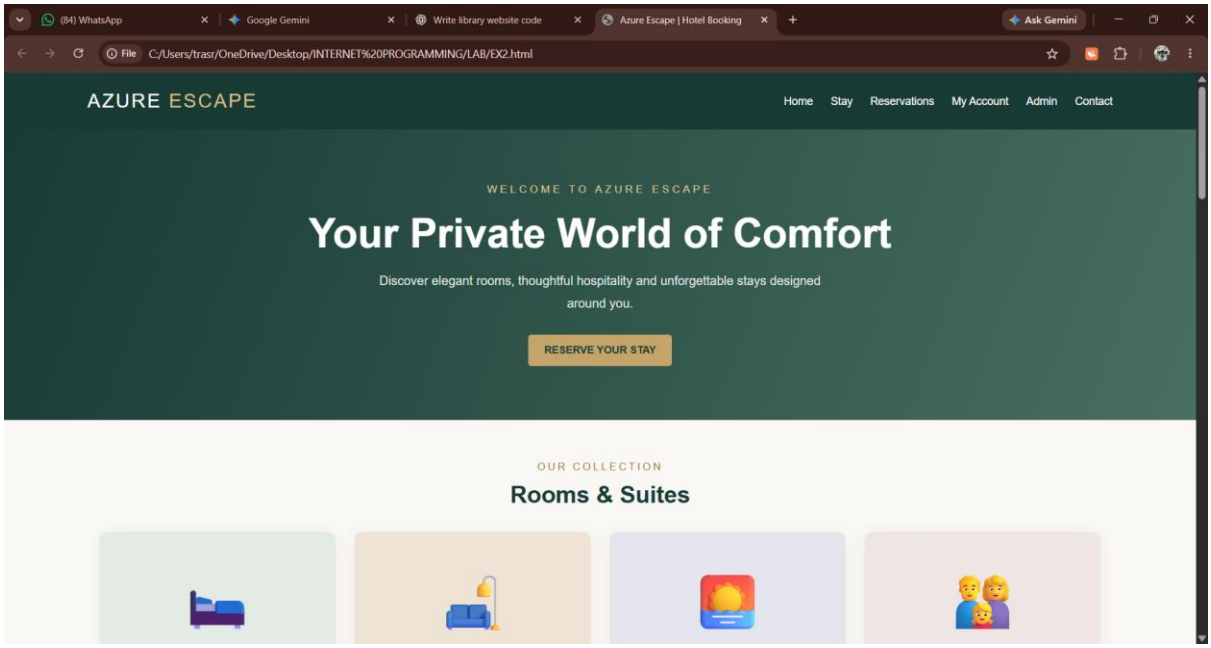

```
<!DOCTYPE html>
<html>
<head>
  <title>Hotel Booking</title>
  <style>
    body {
      font-family: Arial;
      background: #f4f4f4;
      text-align: center;
      margin: 0;
    }
    header {
      background: #234b63;
      color: white;
      padding: 20px;
```

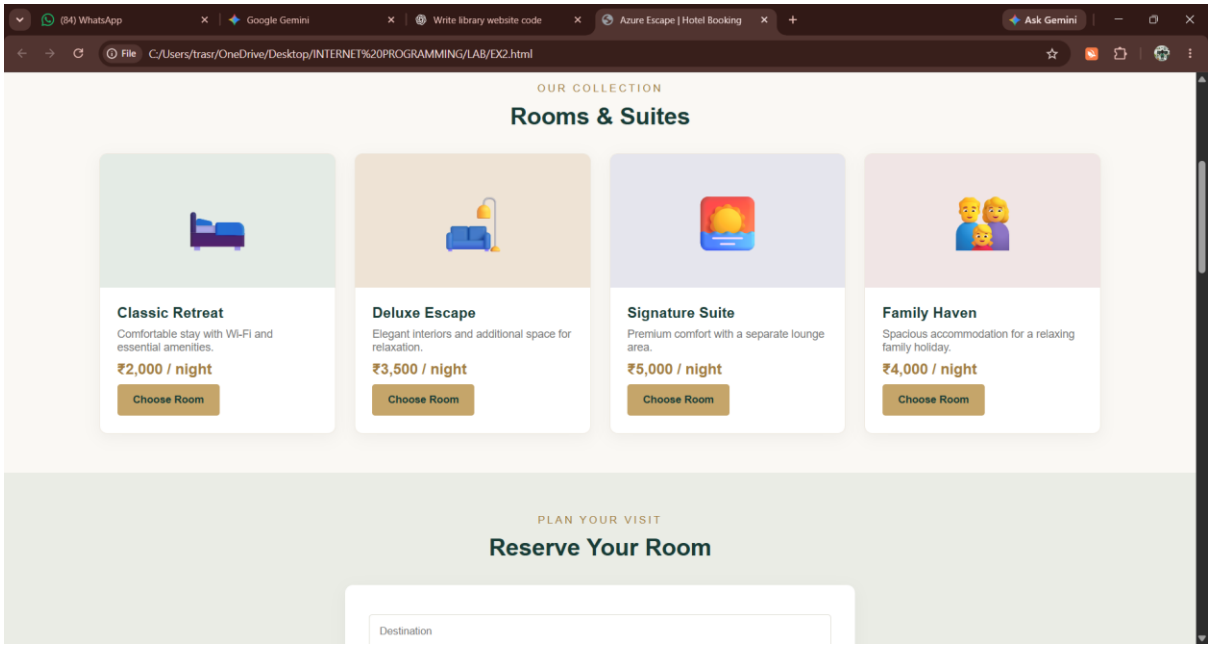

```
        }
        .box {
            background: white;
            margin: 20px auto;
            padding: 20px;
            width: 300px;
            border-radius: 8px;
        }
        input, select, button {
            padding: 10px;
            margin: 8px;
        }
        button {
            background: #168b7c;
            color: white;
            border: none;
            cursor: pointer;
        }
    </style>
</head>
<body>
<header>
    <h1>Welcome to Grand Hotel</h1>
    <p>Comfortable Stay, Memorable Experience</p>
</header>
<div class="box">
    <h2>Book a Room</h2>
    <input type="date" aria-label="Check-in date">
    <input type="date" aria-label="Check-out date">
    <select>
        <option>1 Guest</option>
```

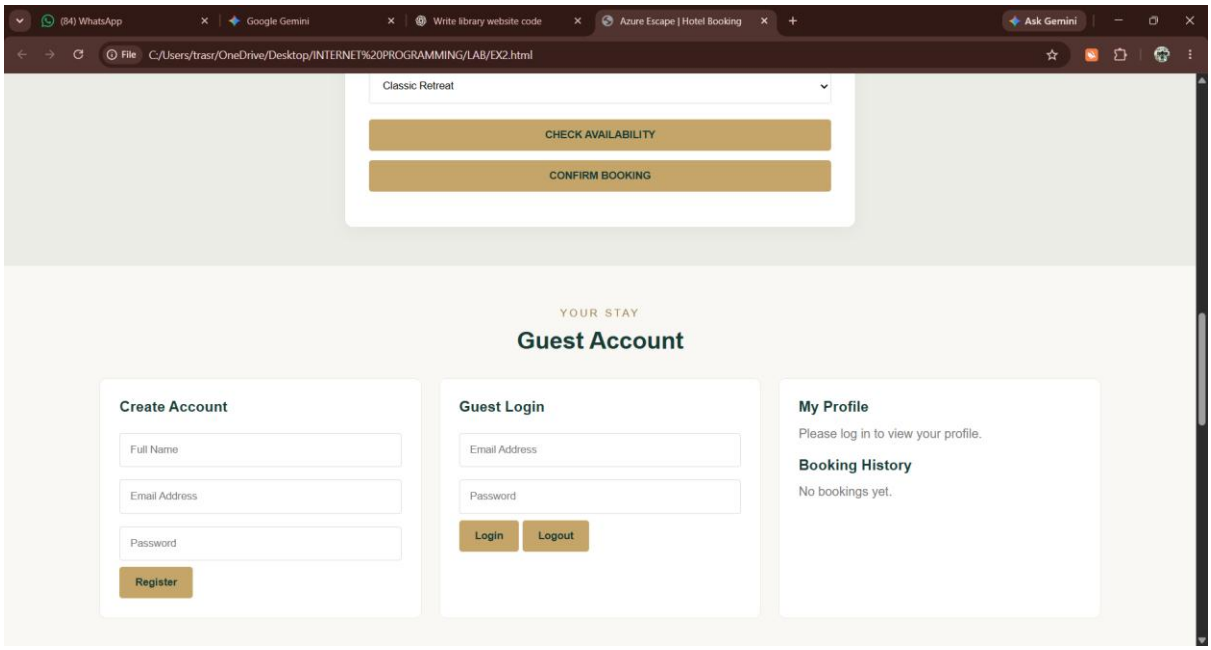

```
        <option>2 Guests</option>
        <option>3 Guests</option>
        <option>4 Guests</option>
    </select>
    <button>Check Availability</button>
    <button>Book Now</button>
</div>
<div class="box">
    <h2>Room Types</h2>
    <p>Standard Room - ₹2000/night</p>
    <p>Deluxe Room - ₹3500/night</p>
    <p>Suite Room - ₹5000/night</p>
    <p>Family Room - ₹4000/night</p>
</div>
<div class="box">
    <h2>User Login</h2>
    <input type="email" placeholder="Email">
    <input type="password" placeholder="Password">
    <button>Login</button>
    <button>Register</button>
</div>
<div class="box">
    <h2>My Bookings</h2>
    <p>View, modify or cancel reservations.</p>
    <button>Booking History</button>
    <button>Cancel Booking</button>
</div>
<div class="box">
    <h2>Administrator</h2>
    <button>Manage Rooms</button>
    <button>Manage Bookings</button>
```

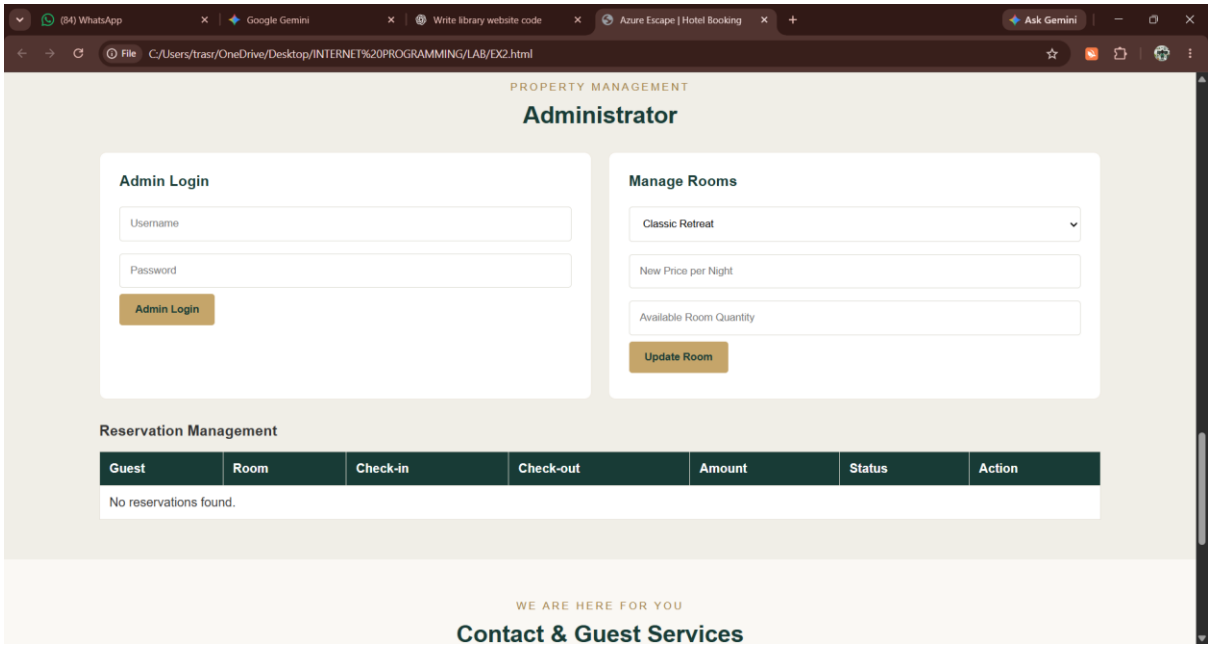

```
    <button>Update Prices</button>
</div>
<div class="box">
    <h2>Contact & Information</h2>
    <p>Contact: hotel@example.com</p>
    <p>FAQs | Travel Guide | Privacy Policy</p>
</div>
</body>
</html>
```

5. Result

Thus, a basic Online Hotel Room Booking website was designed using HTML and CSS. Backend integration is required for actual room availability checks, account management, booking modifications, cancellations, and secure payments.
